Mobile Music Streaming App

AIM

The aim is to create storyboards representing the user flow for a mobile **Music Streaming application (Music Play)** using Balsamiq Wireframes.

PROCEDURE

1. **Tool Used:** Balsamiq Wireframes (<https://balsamiq.com>).
2. **Project Setup:** Created a mobile project to simulate the user experience from authentication to content discovery and library management.
3. **Screen Design:** Each screen represents a key step in the audio consumption journey (Login, Discovery, Search, and Personal Library).
4. **UI Components:** Utilized Balsamiq's library to drag-and-drop components such as input fields, social login icons, bottom navigation bars, and media placeholders.
5. **Design Philosophy:** The wireframes prioritize a clean, content-first layout with a standardized bottom navigation for easy thumb reach.

USER FLOW

1. **Login/Signup Screen:** The entry point where users authenticate via credentials or social media platforms.
2. **Homepage (Discovery):** A centralized hub for personalized recommendations, recently played tracks, and content filters (Music/Podcasts).
3. **Search & Browse:** A dedicated space for users to query specific artists or explore curated genres and live events.
4. **Your Library:** The user's personal collection containing liked songs, saved albums, and custom playlists.
5. **Music Player (Mini-Player):** A persistent UI element allowing users to control playback while navigating the app.

SCREEN-BY-SCREEN BREAKDOWN

1. Login Screen

- **Components:** * App Logo (Music Play)
 - Username/Email and Password input fields
 - "Signup" toggle link
 - Social Login buttons (Google, Facebook)
- **Purpose:** To provide a secure and quick authentication process for returning and new users.

2. Homepage

- **Components:** * Content Filters (All, Music, Podcasts)
 - "Jump back in" section (Horizontal scroll for recently played)
 - "Recents" grid for quick access
 - Bottom Navigation Bar (Home, Search, Library)
- **Purpose:** To reduce friction by surface-leveling the user's favorite and most recent content.

3. Search Screen

- **Components:** * Global Search Bar
 - "Start browsing" category tiles (Music, Podcasts, Live Events, I-Pop)
 - "Discover something new" recommendation cards
- **Purpose:** To facilitate both specific intent-based searching and broad discovery of new genres.

4. Your Library

- **Components:** * Filter chips (Playlists, Albums, Artists)
 - Sort options (Recents) and View toggles
 - "Liked Songs" playlist (Hero item)
 - **Mini-Player:** Displays current track info with Play/Add buttons.
- **Purpose:** To give users a sense of ownership over their saved music and provide seamless playback control
