Trendss Shopping App

I developed a mobile shopping application prototype named **Trendss** using Proto.io. The prototype focuses on creating a smooth and engaging e-commerce experience by combining both familiar and innovative navigation elements. The design includes three main screens: **Login Page, Home Page, and Profile Page.**

The objective was to ensure ease of use for first-time users while introducing subtle modern UI interactions to enhance engagement and usability.

Screens Included:

1. Login Page

- Allows users to enter username and password.
- Includes “Forgot Password” and “Sign Up” options for account recovery and registration.
- A bold “Sign In” button for clear call-to-action.

2. Home Page

- Displays promotional banners (e.g., discount offers).
- Search bar at the top for quick product discovery.
- Recommended products section with price and cart icon.
- Bottom navigation bar for easy movement between screens.

3. Profile Page

- Displays user information and profile picture.
- Sections like Orders, Accounts, and Lists for organized access.
- “Buy Again” and “Your Orders” sections for quick re-purchase.

Familiar Navigation Elements:

These elements help users feel comfortable because they are commonly used in most shopping applications:

- Username and password login fields
- Search bar at the top of the home screen
- Bottom navigation bar (Home, Shop, Wishlist, Cart, Profile)

- Add-to-cart icon on product cards
- Orders and Account management options

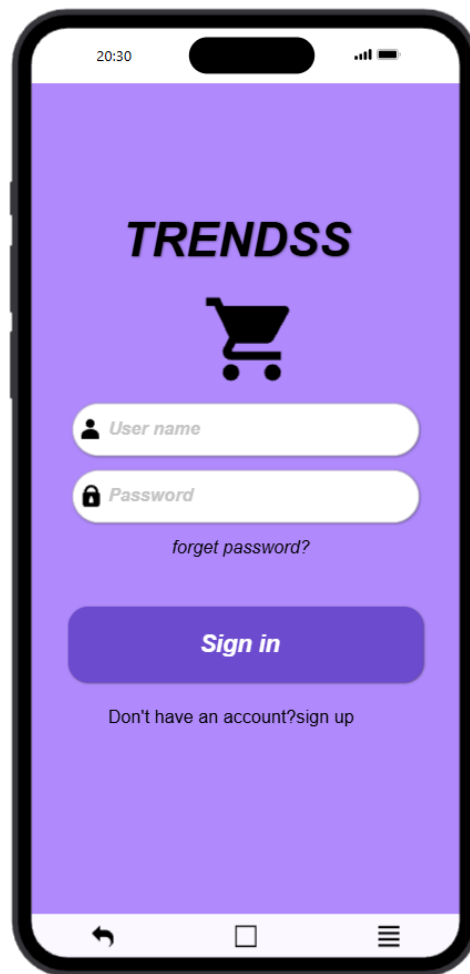

These patterns reduce the learning curve and make the app intuitive.

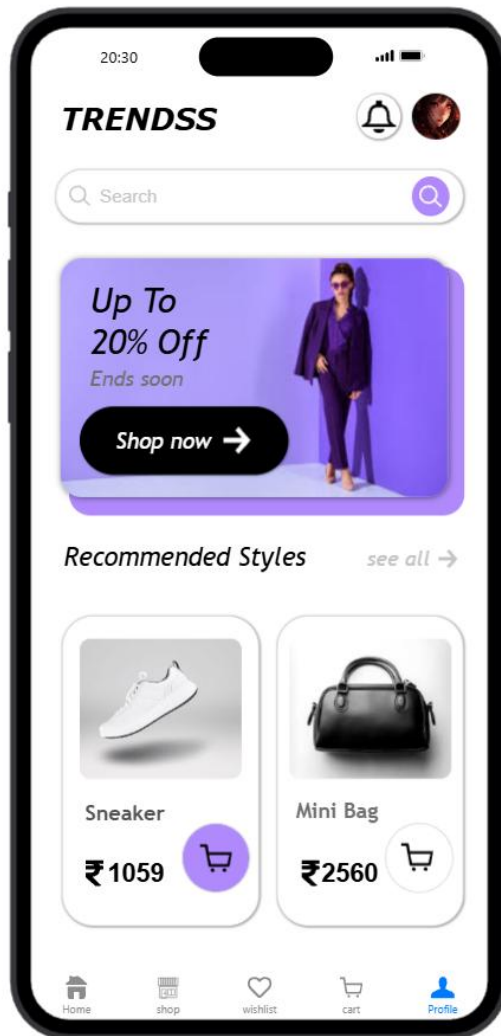

Unfamiliar / Novel Navigation Elements:

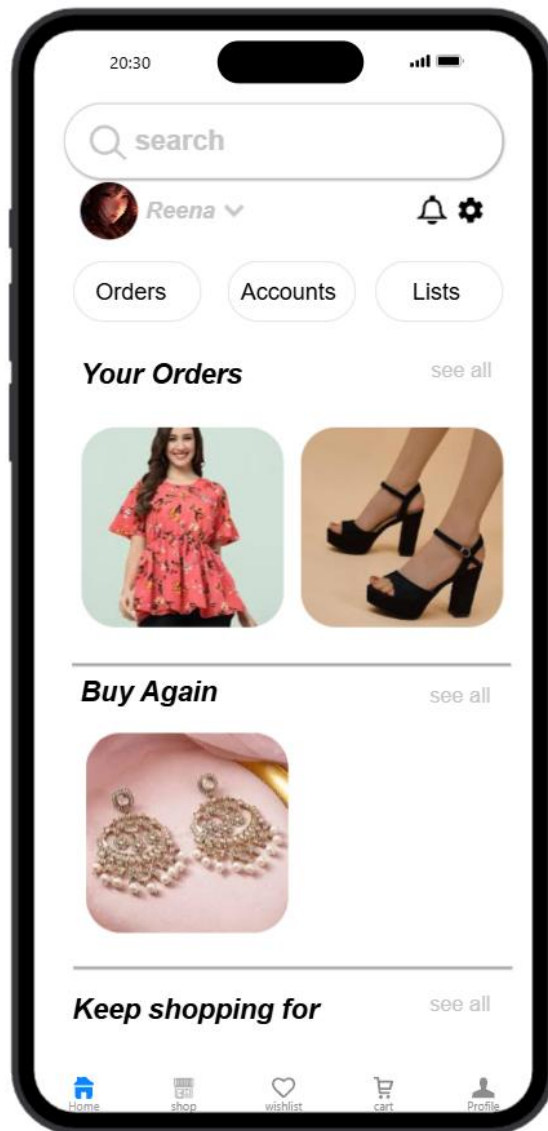

To enhance user engagement, the prototype includes modern interaction elements:

- Dynamic promotional banner with visually strong CTA (“Shop Now”)
- Personalized sections like “Buy Again” to improve shopping efficiency
- Modern card-style product layout with floating cart button
- Minimalistic purple theme for strong brand identity

These elements aim to create a visually appealing and interactive shopping experience while maintaining usability.
